Amin Shabaninejad - Android Team Lead | Senior Android Engineer

amin.shabani98@gmail.com | GitHub | LinkedIn

Summary

Android engineer with more than **8 years of experience** turning ambitious ideas into apps used by **15M+ people worldwide**. I build fast, secure, and scalable apps with **Kotlin, Jetpack Compose**, **KMP/CMP**, and **modern Android architecture**, backed by solid **testing and CI/CD**. Alongside hands-on development, I lead **technical design, code quality**, and **delivery for the Android team**, working closely with Product, Design, Backend, and QA. I use **AI tools** every day, always with careful review, and I've worked across fintech, retail, healthcare, and real-time systems.
My focus: clean code, practical **technical leadership**, **measurable impact**, and user experiences that create **real-world value**.

Skills

Android Engineering: Kotlin, Java, Android, Jetpack Compose, Coroutines, Flow, KMP, CMP

Architecture: Clean Architecture, Modular Architecture, MVI, MVVM, MVP, SOLID, Shared & Platform-Specific Architecture

Quality & Testing: TDD, JUnit, Espresso, Robolectric, MockK, Mockito, Screenshot Testing, Quality Gates

CI/CD & Productivity: GitLab CI, GitHub Actions, Azure DevOps, Gradle, Build Automation, APK Signing & Distribution, AI-Assisted Engineering

Networking, Data & Security: NFC, HCE, BLE, GraphQL, Apollo, Retrofit, REST APIs, WebSocket, Room, Realm, SQLite, OAuth 2.0, Android Security, OWASP MASVS, PCI-DSS

Leadership & Delivery: Technical Leadership, Team Leadership, Sprint Planning, Prioritization, Capacity Planning, Estimation, Task Breakdown, Delivery Coordination, Hiring, Technical Interviews, Onboarding, Mentoring, Code Reviews, Merge Approval

Tools & Platforms: Jira, Confluence, Bitbucket, Git, GitHub, GitLab, Firebase, Crashlytics, Amplitude, Google Maps, OpenStreetMap, WebRTC, Socket.IO, Koin, Hilt, Dagger 2

Experience

Android Team Lead - Sepino
07/2025 – Present | Remote, Iran
Sepino is a neo-banking platform with more than 7 million users in Iran, making it one of the largest neo-banking apps in the country.

- Building **core banking features** in **Kotlin and Compose Multiplatform** for **Android, iOS, and web**, including digital cheques, cards, accounts, currency purchase, and **offline-tolerant payment flows**.
- Leading the Android work on **Kahroba**, an **NFC tap-to-pay** feature built on **Host Card Emulation (HCE)**, card tokenization, and limited-use key replenishment.
- Working in a **70+ module codebase** with **Gradle convention plugins**, MVI, Coroutines, and Flow, and rolled out **Detekt** rules across all feature modules to keep the code consistent.
- **Designed and built the initial Desktop Web foundation** in Compose Multiplatform, separating shared logic from desktop-specific UI and creating a structure the team can extend.
- Designing **reusable platform modules**, including **document-upload infrastructure** for camera and file inputs and a consolidated **SMS Retriever module**.
- Designing and maintaining **GitLab CI pipelines** with **automated tests, lint and quality gates**, versioned **signed and unsigned APK builds, and QA artifact distribution**.
- Partnering with Product, Design, Backend, Security, Frontend, and QA to shape **technical strategy, assess delivery risks**, and translate roadmap and UX requirements into **actionable engineering plans**.
- Leading **technical direction** for a **nine-person Android team**, including sprint planning, task breakdown, and **final code reviews and merge approvals**, while staying hands-on in the code.
- **Mentoring engineers** and supporting **hiring and onboarding** by participating in **technical interviews**, guiding **new joiners** through the codebase, architecture, engineering standards, and delivery practices, and providing ongoing code review and implementation support**.**

Senior Android Developer - Borvista
05/2022 – 06/2025 | Remote, US (Contract)
Consulting partner developing fintech and retail solutions for clients such as Stop & Shop, FoodLion, and Hannaford, a major U.S. grocery retailer with 3M+ users.

- Spearheaded the adoption of **Jetpack Compose** for building UI components in the codebase, resulting in a 20% reduction in UI bugs, which improved user experience and stability in high-traffic retail apps.

- Owned the Android implementation of several **A/B experiments** using **Firebase Remote Config** feature flags, building control and test flows and adding **analytics** to compare user behavior and support rollout decisions.
- Followed **TDD** utilizing the **JUnit** framework and optimized codebase test coverage to 80% in the domain layer, achieving a 30% decrease in overall bugs, leading to more reliable user flows and better user experience.
- Enhanced **CI/CD** processes using **GitHub Actions** and **Gradle** commands, optimizing the app release workflow and cutting deployment time by 15%.
- Championed mentorship initiatives among a **team of 4 Android developers,** resulting in significant improvements, such as reducing pull request review time from two days down to eight hours per submission.
- Designed and implemented features using **MVVM** architecture with **Kotlin, Hilt, Coroutine Flow, Jetpack Compose,** and **Apollo GraphQL,** achieving clear separation of concerns and boosting test coverage to 80% across the ViewModel and domain layers.
- Played a key role in developing a payment **SDK** for a retail application using **Kotlin** and **modern architecture**, contributing to the successful launch of the **Hannaford** app, which reached **100K+ users** in **the first 6 months**.
- **Contributed to the Stop & Shop Android app**, strengthening secure payment and checkout flows that process **millions of daily transactions**; passed formal penetration testing and enforced **OWASP MASVS** and **PCI-DSS** compliance to ensure data security.
- Collaborated daily with cross-functional teams across **3 time zones (US, EU, ME)** in Agile sprints, maintaining an over 95% sprint delivery rate.

Senior Android Developer - BrainGoMo

09/2021 – 04/2022 | Remote, Germany

Health-tech startup focused on connected wearables and heart-rate monitoring using BLE devices.

- Rebuilt the core Android app UI using **Jetpack Compose**, improving rendering speed by 40% and increasing user engagement by 25%.
- Integrated **Corsano SDK** for wearable BLE tracking, enhancing data accuracy by 35% and lowering sync failure rates by 20%.
- Built a **real-time tracker** using **WebSocket**, enabling doctors and clinics to monitor mental activity as it happened.
- Delivered a **modular architecture** with dynamic feature modules, cutting cold-start time from 4.8s to 2.9s.
- Implemented secure payments with **Google Pay, Stripe, and PayPal**, reducing checkout drop-offs by 20%.
- Optimized battery consumption using **WorkManager** and **coroutines**, achieving a 25% improvement in power efficiency.

Android Developer - Paziresh24

11/2018 – 08/2021 | Tehran, Iran

Iran's leading doctor and clinic booking platform with over 2M downloads and 500K monthly active users.

- Developed end-to-end appointment booking and online consultation modules, increasing daily bookings by 40%.
- Implemented **real-time chat** using **WebSocket**, cutting doctor-response time by 35% and raising patient satisfaction scores by 20%.
- Integrated **Google Maps SDK + Geofencing API** for nearby-clinic discovery, resulting in **60K+ monthly location-based appointments**.
- Created secure media/document sharing via encrypted file streams, ensuring compliance with patient data privacy standards.
- Built **appointment reminders and in-app notifications**, improving re-booking rate by 25%.
- Improved app stability through **Firebase Crashlytics monitoring**, achieving **99.3% crash-free sessions**.
- Contributed to the release of the app on Google Play (2M+ installs, 4.7★ rating).

Education & Certifications

Bachelor of Science, Computer Engineering

Yazd University, Yazd, Iran *09/2013 – 09/2018*

Awards

Ranked **4th** place out of 100 teams in **Sharif University National Mobile Programming Marathon (MPM4);** Developed *ChoobKhat*, a blockchain-based debt and credit tracking concept. *2017*

Certifications

Compose Multiplatform — Udemy, 2025

Product Management — Bozhan Product School, 2022
